

UiPath Exercise

PROCESS DESCRIPTION

Before you Begin:

UiPath is only available for Windows and cannot be installed on Mac. Please make sure to get access to a computer or a laptop with a Windows operating system.

Don't forget to use best practices (like naming conventions and making sure the robot works on different computers).

Step-by-Step Guide:

1. Download the Community Edition of UiPath. Select **“UiPath Studio”**.
https://platform.uipath.com/portal_/register
2. Unzip the “Input” folder and save it locally.
3. Use the Robotic Enterprise Framework, create a new one from the template in Studio.
4. Change the transaction item type from QueueItem to DataRow.
5. The exercise consists of reading the PDF files stored in the “Input” folder and extract the information highlighted in red:
 - Invoice number
 - Order number
 - Invoice date
 - Due Date
 - Total Amount
6. Once all invoices have been read, sort the information by “Due Date”, from newer to older dates, and store the information in an Excel file.

When you are done with the exercise, zip your UiPath project and your results (Excel file) and send it to your Roboyo contact. Have fun automating! 😊

INVOICE

From:	To:
Company A	Company B
12, Street A	13, Street B
Barcelona	Nuremberg

Invoice Number	INV-12345
Order Number	12345
Invoice Date	20/08/2021
Due Date	20/11/2021
Total Amount	99,00€
